OLA INSIGHTS

Successful Rides vs. Cancellations

- Majority of rides are successful, but a notable percentage are cancelled.
- **Customer cancellations** are higher than **driver cancellations**, hinting at mismatched expectations (e.g., wait times, surge pricing).

Ride Distance Patterns

- Certain vehicle types (e.g., **Prime Sedan / SUV**) are preferred for **long-distance rides**.
- Smaller vehicles (Auto, Mini) dominate **short city trips**.

Top Customers Drive Demand

- A small group of customers contribute **significantly more rides** → they are loyalty candidates.

Customer Ratings by Vehicle Type

- Higher ratings observed for **comfort vehicles (Sedan, SUV)**.
- **Lower ratings** for autos/minis → customers may find these less reliable or less comfortable.

Payment Method Preferences

- **UPI payments** dominate, showing digital adoption.
- Cash is still present but contributes less to total value.

Overall Takeaways

- **Customer cancellations** are the biggest operational bottleneck.
- **UPI is the preferred mode of payment** — good sign for digital integration.
- **Premium vehicles bring higher value** but suffer from inconsistent driver quality.
- **Top customers are highly valuable** — targeting them with loyalty programs could maximize revenue.
- **Driver training and performance monitoring** can improve ratings and reduce cancellations.
